DETAILED ACTION

Claim Rejections - 35 USC § 102

The following is a quotation of the appropriate paragraphs of 35
 U.S.C. 102 that form the basis for the rejections under this section made in this
 Office action:

A person shall be entitled to a patent unless -

- (b) the invention was patented or described in a printed publication in this or a foreign country or in public use or on sale in this country, more than one year prior to the date of application for patent in the United States.
- 2. Claims 1, 2, 4 and 5 are rejected under 35 U.S.C. 102(b) as being anticipated by Morris et al US Patent 5,349,471.

In regard to claim 1, Morris et al teaches (see Figures 2, 3, 4) a hybrid lens comprising a refractive surface (1) that refracts incident light and a diffractive surface (3) that diffracts light exiting the lens, the diffracting surface designed by a sag satisfying the equation recited as described in column 4, lines 11-68, column 5, lines 1-5. Although the prior art does not specifically disclose the claimed equation, this feature is seen to be an inherent teaching of that device since sag is a component of path length and would have to be accounted for in constructive interference at the focal point.

Regarding claim 2, Morris et al teaches that the refractive surface has a low order aspheric profile z satisfying the equation recited as described in column 6, lines 60-68 and column 7, lines 1-5.

Regarding claim 4, Morris et al teaches that the refractive surface has a numerical aperture above 0.85 as described in column 8, lines 55-56.

Application/Control Number: 10/647,510

Art Unit: 2872

Regarding claim 5, Morris et al teaches that the diffractive surface has a depth Lm satisfying the recited equation as described in column 4, lines 11-68, column 5, lines 1-65. Although the prior art does not specifically disclose the claimed equation, this feature is seen to be an inherent teaching of that device since the depth is a component of path length and would have to be accounted for in constructive interference at the focal point.

Claim Rejections - 35 USC § 103

- 3. The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:
 - (a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negatived by the manner in which the invention was made.
- 4. Claim 3 is rejected under 35 U.S.C. 103(a) as being unpatentable over Morris et al US Patent 5,349,471.

Regarding claim 3, Morris et al discloses the claimed invention except for that the diffractive surface has a minimum pitch of 3 μ m. It would have been obvious to one having ordinary skill in the art at the time the invention was made to have a minimum pitch, since it has been held that discovering an optimum value of a result effective variable involves only routine skill in the art. One would have been motivated to have a minimum pitch for the purpose of improving the diffraction efficiency of the lens. *In re Antonie*, 559 F.2d 618, 195 USPQ 6 (CCPA 1977)

Art Unit: 2872

Conclusion

- 5. The prior art made of record and not relied upon is considered pertinent to applicant's disclosure. Meyers US Patent 5,715,091 teaches a hybrid lens having the features recited as described in column 6, lines 24-67, column 7, lines 1-65 and column 9, lines 60-66.
- 6. Any inquiry concerning this communication or earlier communications from the examiner should be directed to Alessandro V. Amari whose telephone number is (571) 272-2306. The examiner can normally be reached on Monday-Friday 8:00 AM to 5:30 PM.

If attempts to reach the examiner by telephone are unsuccessful, the examiner's supervisor, Drew Dunn can be reached on (571) 272-2312. The fax phone number for the organization where this application or proceeding is assigned is 703-872-9306.

Information regarding the status of an application may be obtained from the Patent Application Information Retrieval (PAIR) system. Status information for published applications may be obtained from either Private PAIR or Public PAIR. Status information for unpublished applications is available through Private PAIR only. For more information about the PAIR system, see http://pair-direct.uspto.gov. Should you have questions on access to the Private PAIR system, contact the Electronic Business Center (EBC) at 866-217-9197 (toll-free).
